#### Notices:

- 1) Battery warranty is defined as when the battery pack reaches the warranty period or the life cycle discharge is completed, the remaining capacity EOL meets the specification requirements, and the first comes into effect; the power module DCDC only involves the warranty period and has nothing to do with the battery performance. The battery pack and power module provide independent warranty.
- 2) Capacity test conditions: at an ambient temperature of 25°C±3°C, after charging to 100% SOC, let it stand for 10 minutes, and discharge the tested battery cell at a set current of 0.2C to the discharge termination voltage, and record the amount of electricity released in the process.
- 3) In order to remotely upgrade the latest firmware to ensure battery life, the battery is highly recommended to connect to the Huawei FusionSolar SmartPV management system. For battery products that are not connected to the Huawei FusionSolar, if the electrochemical cell is damaged due to the failure to update the cell in time, the warranty is not covered.
- 4) After the battery is purchased, the installation needs to be completed within one month. If the battery fails, it needs to be reported within one month. The battery cell damage caused by the negligence of battery that cannot be charged for a long time is not covered by the warranty.
- 5) The operation and service life of battery are related to the working temperature. Please install the battery at a temperature equal to or better than the ambient temperature. The recommended working temperature for battery is 15~30℃.

## **Warranty Extension:**

Warranty extension is possible at any time during the warranty for inverter. If you already have a valid warranty extension, you can extend it again within warranty period. (Except for Smart String Battery)
